EvaluationWeb® XPEMS is the cutting edge, high quality, and user friendly alternative to CPEMS. In production by Luther Consulting since 2000, and currently in version 4.0, it is a CDC approved alternative with significant advantages.

Currently the system is in use by state health departments in Indiana, Iowa, North Carolina, Wisconsin, South Dakota, Arizona, and Colorado. Call them! We get great references (and we'll be happy to give you their phone numbers). We are also conducting a CDC sponsored pilot test for several 07-768 grantees.

We've really focused on developing a system that is easy to use for CBOs. We design data screens to match your forms as closely as possible and rapid screen customization is provided to accommodate the needs of individual agencies. Because of its ease of use, EvaluationWeb significantly reduces staff burden for data entry and reporting, and because it is completely web-based, it requires no internal IT staff support. No desktop certificate is required for the system.

Luther Consulting provides all of the hosting, continual upgrades to the system, and provides each agency with a copy of its data on a monthly basis. You can also download your data whenever you want. EvaluationWeb is completely web-based requiring only the free Adobe Flash plug-in.

Technical Assistance is included! Administrators and end users can contact experienced technical personnel via a toll-free phone number or e-mail. Most questions can be answered quickly, with no response taking more than one business day. The system has built-in capabilities for remote desktop assistance to provide advanced technical support when needed.

Included with EvaluationWeb is Reflexx, our highly acclaimed ad-hoc report writer, which lets users quickly do ad-hoc queries of their data, as well as download data subsets for further analysis in Excel and CSV formats. With Reflexx, users have real-time access to their data. Used in conjunction with EvaluationWeb, Reflexx easily delivers highly synthesized and analyzed data to even the most inexperienced technology user.

We have a demonstration site available, or view our web site at www.evaluationweb.com

Pricing for Directly Funded CBOs - EvaluationWeb with Reflexx Report Writer:

For directly funded CBOs in response to PS10-1003.

\$6,000 one time start-up fee.

\$900 per month up to 5 users; \$1,600 per month for 6 to 20 users; \$2100 per month for more than 20 users.

This pricing includes customization of data screens to meet the needs of the agency. Pricing assumes that there are no sub-grantee agencies. Pricing for agencies with sub-grantees is available upon request.

For directly funded CBOs in states already using EvaluationWeb (and the state health department consents to allow them to use the state implementation). Data would be separated out for purposes of reporting to CDC, but all data would be available across an agency's intervention regardless of funding source).

\$8500 one time start up fee.

\$500 per month (unlimited users).

This pricing includes making necessary programming changes to state implementation to allow for separation of state and Directly Funded CBO data. Directly Funded CBO must use any state required forms and data elements and accept any statewide changes to EvaluationWeb required by the state health department. A single log-in would provide access to all interventions regardless of funding source, and client data would be seamlessly available across interventions, regardless of funding source. Pricing assumes that there are no sub-grantee agencies.
